

Forwarding:

| Mux control | Source | Explanation |
|---------------|--------|--|
| ForwardA = 00 | ID/EX | The first ALU operand comes from the register file. |
| ForwardA = 10 | EX/MEM | The first ALU operand is forwarded from the prior ALU result. |
| ForwardA = 01 | MEM/WB | The first ALU operand is forwarded from data memory or an earlier ALU result. |
| ForwardB = 00 | ID/EX | The second ALU operand comes from the register file. |
| ForwardB = 10 | EX/MEM | The second ALU operand is forwarded from the prior ALU result. |
| ForwardB = 01 | MEM/WB | The second ALU operand is forwarded from data memory or an earlier ALU result. |

FIGURE 4.55 The control values for the forwarding multiplexors in Figure 4.54. The signed immediate that is another input to the ALU is described in the *Elaboration* at the end of this section.

1. EX hazard:

```
if (EX/MEM.RegWrite
and (EX/MEM.RegisterRd ≠ 0)
and (EX/MEM.RegisterRd = ID/EX.RegisterRs)) ForwardA = 10

if (EX/MEM.RegWrite
and (EX/MEM.RegisterRd ≠ 0)
and (EX/MEM.RegisterRd = ID/EX.RegisterRt)) ForwardB = 10
```

2. MEM hazard:

```
if (MEM/WB.RegWrite
and (MEM/WB.RegisterRd ≠ 0)
and not(EX/MEM.RegWrite and (EX/MEM.RegisterRd ≠ 0)
and (EX/MEM.RegisterRd ≠ ID/EX.RegisterRs))
and (MEM/WB.RegisterRd = ID/EX.RegisterRs)) ForwardA = 01

if (MEM/WB.RegWrite
and (MEM/WB.RegisterRd ≠ 0)
and not(EX/MEM.RegWrite and (EX/MEM.RegisterRd ≠ 0)
and (EX/MEM.RegisterRd ≠ ID/EX.RegisterRt))
and (MEM/WB.RegisterRd = ID/EX.RegisterRt)) ForwardB = 01
```

Stall hazards:

```
if (ID/EX.MemRead and  
    ((ID/EX.RegisterRt = IF/ID.RegisterRs) or  
     (ID/EX.RegisterRt = IF/ID.RegisterRt)))  
    stall the pipeline
```

Diagram to use for the hardware

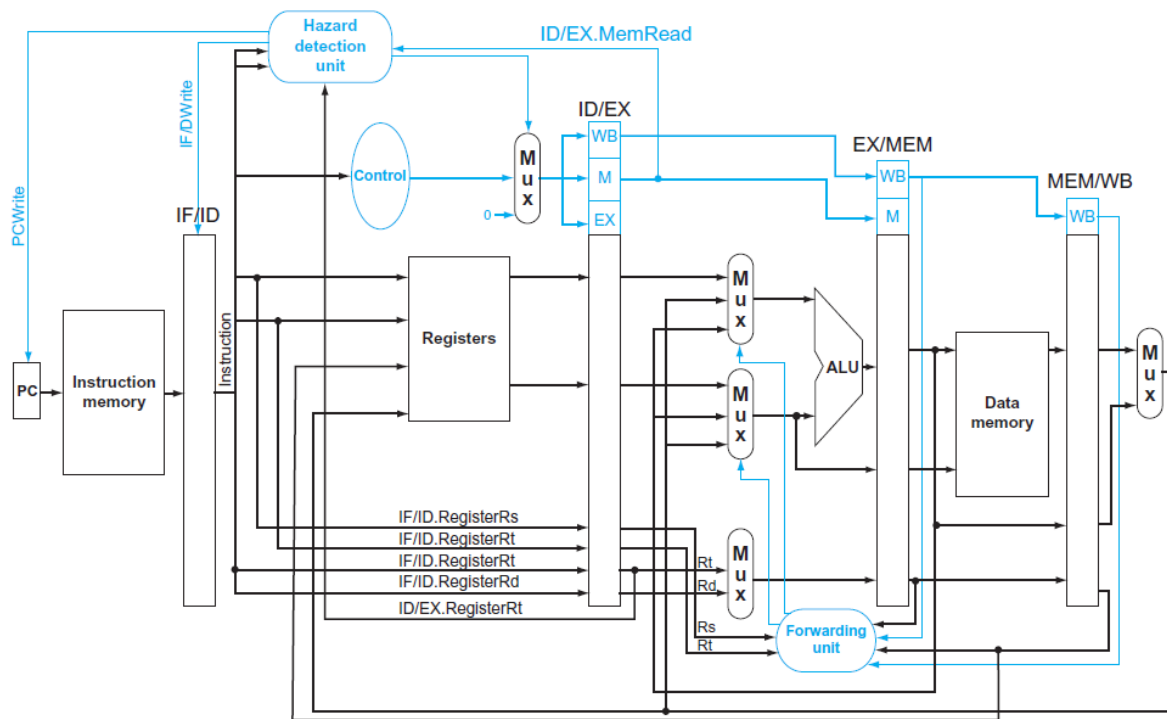

FIGURE 4.60 Pipelined control overview, showing the two multiplexors for forwarding, the hazard detection unit, and the forwarding unit. Although the ID and EX stages have been simplified—the sign-extended immediate and branch logic are missing—this drawing gives the essence of the forwarding hardware requirements.
